

A micro innovative technology
for handy brilliant results.

**The innovative solution for stain proofing
treatment of ceramics and derived materials.**

The innovative solution for stain proofing treatment of ceramics and derived materials.

Keser Italia proposes a series of **patented nanotechnology** based on **UV crosslinking** of **photo-curable organic resin**, for the treatment of the surface of ceramic tiles.

Principle:

- sealing the pores on the surface of the substrate of flooring.

Primary properties:

- stain protection prolonged in time;
- sealing the pores on the surface of the substrate.

Secondary properties:

- prolonged light stability;
- resistant to abrasion.

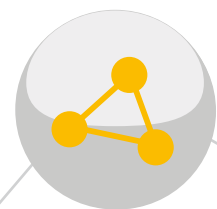

A micro innovative technology for handy brilliant results.

These products represent the optimal anti-stain treatment for the following types of substrate:

- porcelain stoneware polished;
- porcelain stoneware lapped;
- porcelain stoneware polished glazed;
- cotto;
- natural stones;
- resin and cement based composite materials.

The treatments, with high value hygienizing, are ideal for walls and floors of environments with rigorous hygiene requirements as:

- hospital and health building;
- school building;
- environments used for the preparation of foods;
- public buildings.
